

PR0624 SYNMAN

This Torso model has been designed as an alternative to using living or dead animals for the surgical skill stations in acute trauma life support courses. The SYNMAN enables trauma surgery training for Cricothyroidotomy, Chest tube insertion, Pericardiocentesis, Peritoneal lavage and puncture of the bladder. All areas are covered with a realistic skin, which can be replaced as needed. The torso is reusable and all replacement parts may be easily replaced without the need for any additional complicated tools.

A compact model ready for trauma surgery training to begin.

Different procedures can be performed simultaneously on the same model.

The fluids assist in confirming the procedure is being performed correctly.

Simulates real trauma team training!

A convenient set of replacement parts for 16 participants is also available.

Once the training is completed the SYNMAN can be easily cleaned and conveniently stored in a traveling storage case.
